dockerfinder: multi-attribute search of docker images
comicon: a co-operative management system for docker container images
images: new and improved image explorer for astronomical images and beyond
strategic tilling and dynamic scheduling in open-ship service network: case study and analysis
trident: scalable compute archives: workflows, visualization, and analysis
a cloud-based, content-aware dvr for the cloud edge
container based video surveillance cloud service with fine-grained resource provisioning
elastic resource provisioning approach for container in micro-service architecture
service-oriented multi-tenancy (so-mt): enabling multi-tenancy for existing service composition engines with docker
application models for ubiquitous systems with sporadic communication availability
towards a cloud-based, content-aware dvr for the cloud edge: resource-sharing between clouds of mobile devices
towards horizontally scalable apps: resource sharing in the mobile cloud with coap
extemporaneous micro-mobile service execution without code sharing
securing docker containers from denial of service (dos) attacks
aws ec2 vs. joyent's triton: a comparison of docker container-hosting platforms
a survey of the security challenges in docker-based cloud computing systems
container and microservice driven design for cloud infrastructure devops
container management as emerging workload for operating systems
containerization of high level architecture-based simulations: a case study
containers & docker: emerging roles & future of cloud technology
performance analysis of containerized applications: a study on docker scaling performance & resilience engineering approaches
performance engineering for microservices: research challenges & directions
efficiency analysis of provisioning microservices
an architecture to automate performance tests on microservices
containers in research: initial experiences with lightweight infrastructure
a service framework for parallel test execution on a developer's local development workstation
fault diagnosis for microservices with execution trace monitoring
measuring docker performance: what a mess!!!
delivering elastic containerized cloud applications to enable devops
towards a resilient operating system for lightweight isolation containers
common: an automated container based network performance monitoring system
pbench a visualizing network benchmark for microservices
an empirical case for container-driven fine-grained vnf resource flexing
time provisioning evaluation of kvm, docker and unikernels in a cloud platform
a survey on the security of containers
performance comparison between container-based and vm-based services
systematic evaluation of sandboxed software deployment for real-time software on the example of a self-driving heavy vehicle
containerized development and microservices for self-driving vehicles: experiences & best practices
integrity and authenticity for digital long-term preservation in irods grid infrastructure
workload management for power efficiency in heterogeneous data centers
research on building an innovative electric power marketing business application system based on cloud computing and microservices architecture technologies
integrating mobile ilcloud into enterprise architecture: a comparative analysis
pirellicloud: proactive cloud resources management at the edge for efficient real-time big data processing
a cloud-based, content-aware dvr approach for dynamic rating, charging & billing for cloud
design of a sports mental cloud
microservices validation: methodology and implementation
micado – towards a microservice-based cloud application-level dynamic orchestrator
an intelligent cloud resource allocation service: agent-based automated cloud resource allocation using micro-agreement
a cloud-based dvr system
a performance comparison of container-based technologies for the cloud
cloud event programming paradigms: applications and analysis
anatomy of cloud monitoring and metering: a case study and open problems
automated setup of multi-cloud environments for microservices applications
a survey on the security challenges in container based cloud computing
understanding cloud-native applications after 10 years of cloud computing – a systematic mapping study
migrating to cloud-native architectures using microservices: an experience report
pattern-based multi-cloud architecture migration
software architecture for the cloud – a roadmap towards control-theoretic, model-based cloud architecture
software architecture for the cloud – a roadmap towards control-theoretic, model-based cloud architecture
an architecture for self-managing microservices
self-managing cloud-native applications: design, implementation, and experience
synapse: secure and persistent connectivity for containerized systems
synapse: secure and persistent connectivity for containerized systems
scientific, reduced-and machine learning comparison, competition, and collaboration with a multi-cloud platform
modelling and managing deployment costs of microservice-based cloud applications
orchestrated multi-cloud application deployment in openstack with tosca
a cloud-native, multi-cloud, fault-tolerant video ingestion pipeline to display web applications in the cloud
reliable cloud-applications: an implementation through service orchestration
integration of an assisted p2p live streaming service in community-network clouds
practical service placement approach for microservices architecture
cloudware: an emerging software paradigm for cloud computing
a survey on the security of containers
microservices architecture based cloudware deployment platform for service computing
towards an emerging cloudware paradigm for transparent computing
smuggling multi-cloud support into cloud-native applications using elastic container platforms
incremental integration of microservices in cloud applications
towards a cloud-native and cloud-agnostic serverless architectures
infrastructure cost comparison of running web applications in the cloud using aws lambda and monolithic and microservice architectures
cost comparison of running web applications in the cloud using monolithic, microservice, and aws lambda architectures
a parallel devs approach for cloud simulation standards
devstm 3.0 stack: rapid deployment of devs farm in distributed cloud environment using microservices and containers
security-as-a-service for microservices-based cloud applications: a solution via microservices
security-as-a-service for microservices-based cloud applications
security and privacy for cloud-based data management in the health network service chain: a microservice approach
balancing utility and security: securing cloud federations of public entities
a cloud-based service delivery platform for effective homeland security
a cloud-native, multi-cloud, fault-tolerant video ingestion pipeline
docker container security via heuristics-based multilateral security-conceptual and pragmatic study
native cloud applications why virtual machines, images and containers miss the point
native cloud applications: why monolithic virtualization is not their foundation
self-adapted restful web api evolution model
a survey on the security of containers
a framework for the structural analysis of rest apis
api governance support through the structural analysis of rest apis
approaches to the evolution of soa systems
reflections on soa and microservices
a survey on the security of containers in cloud
microservices tenets: agile approach to service development and deployment
differences between model-driven development of service-oriented and microservice architecture
a service identification model for service-oriented architecture
software defined p2p architecture for reliable vehicular communications
microservices: yesterday, today, and tomorrow – a decade of software architecture the resilient agile process
requirements reconciliation for scalable and secure microservice (de)composition
a vnf-as-a-service design through micro-services disassembling the ims
meeting the observability challenges for vnfs in 5g systems
nfv service dynamicity with a devops approach: demonstrating zero-touch deployment & operations
a survey on the security of containers in cloud computing environments
using complex network theory for determining the granularity of microservices
microservices lightweight service descriptions for rest architectural style
a vocabulary for the modelling of image search microservices
improving entity linking with ontology alignment for semantic microservices composition
a survey on the security of containers in cloud computing environments: from study design to data statistics
a study on cloud based biosignals management framework
the growing need for microservices in bioinformatics
service cutter: a systematic approach to service decomposition
the hidden dividends of microservices
a survey on the security of containers: study
a systematic literature review on microservices
a systematic mapping study in microservice architecture
a trace-driven evaluation of cloud computing schedulers for iaas
architecting microservices
a decade of software-as-micro: revisiting industrial practice in services computing
research on architecting microservices: trends, focus, and potential for industrial adoption
emergent software services
pcctr: a portable component conformance test environment based on container cloud for avionics software development
microservices-based software architecture and approaches
a survey on the security of containers
survey on concern separation in service integration
apache airavata as a laboratory: architecture and case study for component-based gateway middleware
microservice design for container based multi-cloud deployment
getting the query right for crisis informatics design issues for web-based analysis environments
microservices architecture for the intelligent grid
domain driven design and provision of micro-services to build emerging learning systems
unified user-interface and protocol for managing heterogeneous deep learning services
unified media: a service side solution for adaptive multicast streaming with inserted and edited media content
decision guidance models for microservice monitoring
cloud-based architectures for environment monitoring
decision models for microservices: design areas, stakeholders, use cases, and requirements
microservices architecture for the intelligent grid: design and challenges
systems of action – a blue print for real-time decision support systems
operator models for delivering municipal solid waste management services in developing countries, part a: the evidence base
community application editor: collaborative near real-time modeling and composition of microservice-based web applications
engineering web applications using real-time collaborative modeling
a microservice based framework for the sharing and exchange of digital objects annotation on the web
trusted digital repository design: a policy-driven approach
digital repository: preservation environment and policy implementation
micro-services based distributable workflow for digital archives
curation micro-services: a pipeline metaphor for repositories
a micro-service based framework for digital preservation in data grids
securing policy negotiation for socio-pervasive business microinteractions: secure, simple and efficient implementation of policy negotiation
metadata for a micro-services-based digital curation system
aggregation and management of metadata in the context of europeana
more: a micro-service oriented aggregator
a micro-service based digital curation system
extracting and ingesting dpl metadata and digital objects from a data archive into the irods extension of the nara tpap using the oai-pmh
metadata capital: automating metadata workflows in the niehs viral vector core laboratory
a community driven micro-services architecture supporting long term digital preservation
business-actors as base components of complex and distributed software applications
a micro-service based digital curation system
three dimensions of process models regarding their execution
a systems approach to big data technology applied to supply chain
highly scalable microservice-based enterprise architecture for smart ecosystems in hybrid cloud environments
experience on a microservice-based reference architecture for measurement systems
a microservice based reference architecture for measurement systems: a case study in industry
development of specialized services for predicting the business activity indicators based on micro-service architecture
dual semiosis analysis model managing customer-focused service innovation
microflows: lightweight automated planning and enactment of workflows comprising semantically-annotated microservices
microflows: automated planning and enactment of dynamic workflows comprising semantically-annotated microservices
towards a reference architecture for the integration of heterogeneous sources of business transformation projects: the basic structure
towards integrating microservices with adaptable enterprise architecture
decision-controlled digitization architecture for internet of things and microservices
digital enterprise architecture with micro-granular systems and services
architecture of an interoperable iot platform based on microservices
a survey on the security of containers in cloud computing
using blockchain to push software-defined iot components onto edge hosts
a secure microservice framework for iot
iot design patterns: computational constructs to design, build and engineer edge applications
diameter of things (dot): a protocol for real-time telemetry of iot applications
a reference architecture for the iot: the lambda architecture and a microservice architecture with microservice-based stream processing
exploiting interoperable microservices in web objects enabled internet of things
performance analysis of anomaly detection of different iot datasets using cloud micro services
automated deployment of smart-iot-cloud services based on continuous integration
microservices in iot clouds
a survey on the security provisioning in cloud of things (cot)
research and development environments for robot services and its implementation
the development of cloud service for testing microservice applications
practical use of microservices in moving workloads to the cloud
multi cloud deployment with containers
a survey on the security of containers for next generation networks
embedding security and privacy into the development and operation of cloud applications and services
towards microservices architecture to transcode videos in the large at low costs
migrating healthcare applications to the cloud through containerization and service brokering
microservices in agile software development: a workshop-based study into issues, advantages, and disadvantages
a survey on the security of containers in cloud computing
experimental evaluation of the cloud-native application design
investigation of impacts on network performance in the advance of a microservice design
a decentralized system for load balancing of containerized microservices in the cloud
swarm-based system for management of containerized microservices in a cloud consisting of heterogeneous servers
a survey on the security of containers in cloud
microservices cloud applications testing approach
microservices validation: mjolnir platform case study
the docker ecosystem needs consolidation
docker cluster management for the cloud – survey results and own solution
modelling, validating, and ranking of secure service compositions
design of saas overcloud for 3-tier saas compatibility over cloudbased multiple boxes
secure cloud micro services using intel sgx
securecloud: secure big data processing in untrusted clouds
the entire approach to decomposing monolithic services into microservices
towards a methodology to form microservices from monolithic ones
osmotic computing: a new paradigm for edge/cloud integration
blockchain based distributed control system for edge computing
a service orchestration architecture for fog-enabled infrastructures
a survey on the security of containers in cloud computing environments
a new efficient distributed computing middleware based on cloud micro-services for hpc
safedroid: a distributed malware detection service for android
software architects in large-scale distributed projects: an ericsson case study
hosting virtual iot resources on edge-hosts with blockchain
a survey on the security of containers in cloud computing systems
vnf modeling towards the cloud-ran implementation
service-oriented robotic swarm systems: model and structuring algorithms
jmech–a scalable web-based platform for visualization and mining of passive acoustic data
swift birth and quick death: enabling fast parallel guest boot and destruction in the xen hypervisor
a cloud-native monitoring framework for iot-enabled cloud-edge continuum systems with atomic complex event processing services
service-driven enrichment for bpr in the omiab environment
exploring research networks with data science: a data-driven microservice architecture for synergy detection
the medical imaging interaction toolkit: challenges and advances: 10 years of open-source development
a micro services architecture for use by microcontroller driven devices to provide interoperability with the open lean services architecture
towards a reliable and robust cloud meta-operating system based on heterogeneous kernels: a novel approach based on containers and microservices
towards a more reliable and robust cloud meta-operating system based on heterogeneous kernels: a novel approach based on containers and microservices
data-driven workflows for microservices: genericity in jolie
a vision for micro and macro location aware services
a case study in computational caching microservices for hpc
microservices: a definition of opinion and facts
a microservice architecture for the intranet of things and energy in smart buildings
iot andw public weather data based monitoring & control software development for variable color temperature led street lights
connected closet: a semantically enriched mobile recommender system for smart closets
iot-enabled physical telerehabilitation platform
a lightweight middleware for the industrial internet of things
a microservice-based middleware for the digital factory
a framework to support interoperability in iot and facilitate the development and deployment of highly distributed cloud applications
end-to-end management of iot applications
microservices as agents in iot systems
a survey on the security of containers in cloud domains
pile coop buildings: internet of things for smart building infrastructure supporting concurrent apps utilizing distibuted microservices
microservice-based iot for smart buildings
a cloud-native monitoring framework for synchronous service delivery in a big cloud infrastructure
first international workshop on architecting with microservices
iot middleware: a survey on issues
a cloud based framework of prognostics and health management for manufacturing industry
cloud-based mobility management in heterogeneous wireless networks
a cloud based framework of prognostics and health management
a framework to facilitate management of services in cloud based fog environments
policy enforcement upon software based on microservice architecture
a context model and policies management framework for reconfigurable-by-design distributed applications
mathematical architecture of microservices for geographic information system based health management system
a cloud-native monitoring framework for synchronous service delivery in microservices based applications
workload-based clustering of coherent feature sets in microservice architectures
sdn applications - the intent northbound interface realisation for extended applications
gremlin: systematic resilience testing of microservices
composing p3ic: a lightweight service model for wireless sensor networks
a cloud-native monitoring framework for iot
extending the saafd workflow to audit data usage for users and service providers in a cooperative scenario
microservice based tool support for business process modelling
system architecture for sns-based collaborative intelligent manufacturing
collaborative drawing annotations on web videos
distributed geographic services: developing a linked data driven location-based service
microservices
a microservices architecture for collaborative document editing enhanced with face recognition
medley: an event-driven lightweight platform for service composition
towards scalable service composition
a microservice based framework for microservices for iot using docker
telecom microservices orchestration
managing microservices architecture by using docker technology
decentralized self-adaptation in large-scale distributed systems
gru: an approach to introduce decentralized autonomic behavior in microservices architectures
a decomposition tool for monolithic applications using collaborative filtering: a step forward for microservice granularity
on the use of prowlets in a predictive maintenance use case
prowlets: component-based mobile agents as microservices for rule-based data access, processing and analytics
prescriptiveml: a framework for streaming soft real-time predictive and prescriptive analytics
s-mime: a social cloud analytical service oriented system
microservices: yesterday, today, and tomorrow
from technologists to social enterprise developers: our journey as "ict for development" practitioners in southern africa
topoleins: building a cybergis community data service for enhancing the usability of high-resolution national topographic datasets
microservices for scalability: [keynote talk abstract]
microservice architectures for scalability, agility and reliability in e-commerce
a decade of software-as-micro: revisiting a microservices architecture perspective
automated fault-tolerance testing
achieving cloud scalability with microservices and devops in the connected car domain
a scalable routing mechanism for stateful microservices
towards a scalable framework for artifact-centric business process management systems
a reusable automated acceptance testing architecture for microservices in behavior-driven development
amorphous transdisciplinary engineering: object orientation meets service orientation with emergent multifidelity management
amorphous transdisciplinary service systems
the optimal macro control strategies of service providers and micro service selection of users: quantification model based on synergetics
a reusable automated acceptance testing architecture for microservice-based business chains
telecom strategies for service discovery in microservice environments
ion-based service discovery mechanism for microservice architecture
distributed systems of microservices using docker and serfnode
design and implementation of a decentralized message bus for microservices
a survey on the security of stateless microservices in cloud computing
from monolith to microservices: lessons learned on an industrial migration to a web oriented architecture
microservices architecture enables devops: migration to a cloud-native architecture
devops
devops and its practices
a reference architecture for devops in a neo-metropolis bdaas platform
the database-in-the-service pattern for microservice architectures
a reference architecture for real-time microservice api consumption
case study: microservice evolution and software lifecycle of the xsede user portal api
using chembl web services for building applications and data processing workflows relevant to drug discovery
the ivoa single sign-on profile: authentication and security for the vo
secos, web of things platform based on a microservices architecture and support of time-awareness
an ecosystem of user-facing microservices supported by semantic models
a methodology and tool support for widget-based web application development
synapse: a microservices architecture for heterogeneous-database web applications
a survey on the security of containers
the methodology, methods and tools for agile ontology maintenance – a status report
intercity: a scalable microservice-based open source platform for smart cities
crowd-sensing our smart cities: a platform for noise monitoring and acoustic urban planning
designing a smart city internet of things platform with microservice architecture
a survey on the security of containers
popcorn: lean lambdas with large libraries
an integrated telecom and it service delivery platform
a survey on the security of containers in cloud
redefining a process engine as a microservice platform
an architectural perspective on service adaption: a platform design and the case of pluggable cross-border trade compliance in e-commerce
data security issues in maas-enabling platforms
tell me again, why should i talk to strangers?
a survey on the security of containers in microservices
a public health surveillance platform mixing free-text sources via natural language processing and linked data: application in adverse drug reaction signal detection using pubmed and twitter
using ab testing in moc environments
emergino: how free software can boost local innovation, a win-win deal between operator and local innovation partners
emergino: an open php paas to stimulate and animate local co-innovation
a survey on the security of containers in cloud computing
enhanced nsp for applying to the network service platform-implementation of a face detection function
nimble collaborative platform: microservice architectural approach to federated iot
social acceptance and usage experiences from a mobile location-aware service environment
user-aware location management of prosumed micro-services
a survey on the security of containers in cloud computing environments and ubiquitous computing
mcudall: an infrastructure for creation and sharing of end user generated microservices
towards a semantic infrastructure for user generated mobile services
defining user-generated services in a semantically-enabled mobile platform
towards a platform for user-generated mobile services
mcudall: a mobile cloud platform for end-user in emerging countries
mcudall: enabling end-user mobile service creation
an evidential and context-aware recommendation strategy to enhance interactions with smart spaces
an ontology-based reasoning framework for context-aware applications
location aiid context-based microservices for mobile and internet of things workloads
a survey on the security of stateless microservices in cloud computing: a case study development process for a microservices architecture
a semi-lazy bandit approach for intelligent service discovery in iot applications
meccano: a mobile-enabled configuration framework to coordinate and augment networks of smart objects
scalable microservice based architecture for enabling dmtf profiles
towards recovering the software architecture of microservice-based systems
a microservice based framework for the sharing and exchange of digital objects annotation
lessons learned on systematic metric system development at a large it service provider
swiss bio integrated operational planning, optimization and ancillary services system
microservices and their design trade-offs: a self-adaptive roadmap
caspile: a programming language for microservices saas
a survey on the security of stateless microservices in cloud computing
sustaining runtime performance while incrementally modernizing transactional monolithic software towards microservices
unprof: a unikernel stack profiler
pipelines: a feature animation pipeline on microservices
verification in the age of microservices
a survey on the security of stateless microservices in cloud computing
pile community on the rise
packaging microservices (work in progress)
language processing modelling notation – orchestration of nlp microservices
the ipol demo system: a scalable architecture of microservices for reproducible research
a survey on the security of stateless microservices in cloud computing
towards the understanding and evolution of monolithic applications as microservices
an ecological perspective on future service environments
transparent cross-system consistency
micriart: a software architecture recovery tool for maintaining microservice-based systems
a survey on the security of stateless microservices in cloud computing
towards an advanced modelling system applying a service-based approach
modelling microservices in email-marketing: concepts, implementation and experiences
microservices
the economics of microservices
a survey on the security of stateless microservices in the cloud as microservices
real-time fasmat environmental information system: a micro-service based architecture
microservices approach for the internet of things
the design and architecture of microservices
hardware analogies to cloud software standards development
a survey on the security of stateless microservices in cloud computing
building on oais: processing born-digital records using archivematica
towards longitudinal data analytics in parkinson's disease
a microservice-based portal for x-ray transient and variable sources
learning-based testing of distributed microservice architectures: correctness and fault injection
a survey on the security of stateless microservices in cloud computing: an industrial experience report
organization & cultural impact of microservices architecture
organizational impact on software development of eservices techniques
an agent-based composition model for semantic microservices
publishing linked data through semantic microservices composition
a survey on the security of stateless microservices: new performance challenges
the hidden dividends of microservices
supporting knowledge management instruments with composable micro-services
microservices architecture for multi-dimensional feature recognition using a knowledge representation model, both based on human perception
a concept for the control, monitoring and visualization center in energy lab 2.0
a survey on the security of stateless microservices in cloud computing
vendor malware: detection limits and mitigation
building critical applications using microservices
microservices in practice, part 1: reality check and service design
microservices in practice, part 2: service integration and sustainability
microservices
open issues in scheduling microservices in the cloud
containerized microservice architecture performance increasing by using a cache subsystem and multithreaded application server
a survey on the security of stateless microservices in cloud computing
integrating personalized and accessible itineraries in maas ecosystems through microservices
a microservice-based architecture for the development of accessible, crowdsensing-based mobility platforms
crowdsensing for smart mobility through a service-oriented architecture
a service-oriented approach to crowdsensing for accessible smart mobility scenarios
